

ACKNOWLEDGMENTS

Funding for the computer time to do this work was provided by the National Environmental Research Park at Los Alamos National Laboratory through contract W-7405-ENG.36 from the US Department of Energy. We heartily thank K. V. Bostick, assistant coordinator, and E. M. Wewerka and W. R. Hansen, coordinators of the Research Park.

Appreciation is expressed to several programs within the US Fish and Wildlife Service for their support of this work: Office of Cooperative Units, Denver Wildlife Research Center, and the Office of Biological Services.

The Denver Wildlife Research Center provided funds for typing the final manuscript. Many people were involved in typing various drafts: we wish to acknowledge E. Montoya, G. Mower, A. Krambule, M. Sievein, and C. Snelling.

Special thanks go to K. Redman, who provided an outstanding editorial review of the final working draft of the manuscript. Her expertise allowed a significant improvement in the readability of the primer.

Thanks also to Elizabeth White for the many hours she spent in proofing the final manuscript.

Four colleagues, R. Anthony, W. Clark, F. Guthery, and L. MacDonald, provided their comments on an early draft of the primer. Their help is appreciated and their suggestions allowed substantial improvement to the present work.

We thank J. Shoemaker for producing the cover drawing and the illustrations in Chapters 3 and 4.

People who provided data from their studies for our use as examples include K. A. Fagerstone, L. E. Lefebvre, R. Mahon, G. H. Matschke, and R. F. Raleigh. We appreciate their help in illustrating the various methods using real data.

Many people who had made major contributions to the theory and practice of capture-recapture and removal studies kindly sent photographs and short narratives for use in this primer. We appreciate their cooperation and, in many cases, their encouragement. In addition, the following aided us in locating addresses, photographs, or information concerning people who had made important contributions, but who are deceased or were difficult to locate: A. N. Arnason, J. G. Box, E. Bursell, J. M. Dunkley, E. R. Easton, C. Elton, G. W. Frame, J. M. B. Harley, W. Jepson, S. C. Kleene, J. L. Laake, H. F. Lamprey, P. M. Mwambu, T. R. E. Southwood, W. H. Stickel, P. Stigger, and H. B. Tordoff.
