INDEX

A

accuracy, 18
animal identification, 168-170
animal births, 181
animal deaths, 120, 162, 171, 173, 181.
  See also emigration.
animal influx, 135, 181. *See also*
  immigration.
area, effective (A), 120, 130, 164
area relating to N, 3
Arnason, A. Neil, 162
assumption of closure. *See closure.*
assumption of equal effort, 104
assumption of finite size, 120
assumption of constant density, 127, 130
assumptions for capture-recapture studies, 3, 7
assumptions for density estimation, 124, 127
assumptions for removal studies, 7
assumptions of removal models, 103

B

Bailey, Norman T. J., 53
ball and urn model, 3, *4*, 7, 27, 46-47, 53
Bayesian statistical methods, 190
behavioral response, 8, 47, 56, 71, 74, 80.
  See also Model M_b, Model M_{bh}.
  clue to, 133
  control of, 163
  in open models, 192
  test for, 77, 82, 90
benthos, stream bottom, 112
bias, 18, *22, 23*
  effect of recaptures on, 134
  in estimators, 26, 90, 175
  minimization of, 114
  in models, 19
  sources of, 120
biotelemetry, 188
births of animals, 181
bootstrap method, 190
boundary strip, 120, 127
boundary strip width W, 120-124, 130, 164
Burnham, Kenneth P., 9

C

CAPTURE, 10-11, 33, 39, 41, 206-221
  computations for closure test, 96
  computation in removal studies, 105
  print-out, 49, 132
  density estimation by, 154
capture occasions in removal studies 105,
  106, 118
capture probabilities,
  constant, 48,
  magnitude of, 41
  unique, 47
  variation in, 47, 52
capture probability p, 6, 47
capture-recapture studies, 1
captures, "sufficient numbers of," 165
caret (^) notation, 6, 16
Carothers, Andrew D., 10
catchability, 181
catchability structure, 132
catchabilities, equal, 7
catch-effort methods, 161
catch per unit effort (CPUE) methods, 114-115
census, 23, 24
Chapman, Douglas G., 54
closure, 3
  methods to ensure, 162
  in removal studies, 117
  tests for 36, *38*, 96-97, 135, 162
closure, demographic, 3-5, 46, 120, 186
closure, geographic, 3-5, 101, 184, 186
coefficient of variation, 24
computer programs, 10, 192
computer simulation, 39
confidence interval, 33
  computation of, 49
  construction of, 33-34
  coverage on N, 190
"contagion of catchability," 8.
  See also Model M_b
Cormack, Richard, 2
cotton rat data, 134
count, 100%, 101

D

D and W, estimation of, 120, 130, 154
$\hat{D}$ and $\hat{W}$, correlation between, 124
Darroch, John W., 29
Darroch's estimator, 53, 54, 91, 216
Darroch's model, 29, 30
data, 5
 anomalies in, 171
 interpretation of, 132
 pooling of, 168
 recording of, 170
 in removal studies, 8
 real-world, 133
data, fish removal, 113-114
data, simulated, 218-221
 for model M_b, 56-63
 for Model M_{bh}, 66-70
 for Model M_h, 63-66
 for Model M_o, 48-49
 for Model M_t, 51-56
 for Model M_{tb}, 71-74
 for Model M_{tbh}, 74-75
 for Model M_{th}, 71
 for removal studies, 104
data stratification, 170
 example of, 135, 139
 in removal studies, 104, 113, 118
 to remove heterogeneity, 163
data, U-shaped, 133
deaths of animals, 120, 181.
 See also emigration.
 effects on livetrapping studies, 162
 171, 173
density D, 120, 130
density estimation, 120
 examples of, 122, 151-154
 future research on, 191-192
 sample size in, 164-165
density, naive estimate of, 120
density, uniform, 151, 154
design. *See* study design.

E

Eberhardt, L. Lee, 63
edge, effect, 120, 164
effort, equal, 104, 163
electrofishing, 101, 104
 data stratification in, 118, 170
emigration, 120, 181
entry rate, 186
error, measurement, 26
error, Type I, 35, 37, 162
error, Type II, 35, 37, 69
estimate, 16
estimates, maximum likelihood, 30, 58
estimation, 16
 of D and W, 120, 130, 154
estimation methods, 26, 115
estimators, 16
 for eight models, 75-76
 robustness of, 27, 90-91
estimator, closed form, 27, 29, 54
estimator, maximum likelihood (ML), 27, 29
 distribution of, 34
 under generalized removal models, 111, 118
 under Model M_b, 58-63
 under Model M_{bh}, 66-70
 under Model M_h, 64-66
 under Model M_o, 49
 under Model M_t, 53-54
 for removal data, 105
 solutions to, 29-30
estimators,
 Darroch, 53, 216
 generalized removal, 90, 216-217
 jackknife, 64-66, 91, 142, 190, 216
 null, 49, 216
 removal, 216-217
 Petersen-Lincoln, 16, 18, 27, 29, 32, 47
 Schnabel, 27, 53-54
 Zippin, 91, 216
estimator of population mean, 16
experiments, "failure criterion" in, 108
experiments, simulated, 173

F

failure criterion in removal experiments, 108
fantail darter data, 114
field forms, 170
field methods, effect on data analysis of, 161
f_i notation, 7, 64
Fisher, Sir Ronald A., 27, *28*

G

generalized removal estimator, 90, 216-217
grids, 120-130, 151-154
 design of, 120, 164
 effective area of, 120
 minimum area of, 166
 nested, 121
 subgrids in, 127, 151
 shape of, 127, 164-165

size of, 3, 164
ground squirrel data, 122, 151

H

H_A. *See* hypothesis, alternative.
H_0. *See* hypothesis, null.
hare data, 109, 113
"hat" (^)
heterogeneity, 8, 47, 63-66, 71, 74. *See also* Model M_h, Model M_{bh}.
clues to, 132
due to unrecognized attributes, 163
elimination of, 163-164
in open-population models, 186, 192
in removal studies, 104, 109, 112, 118
test for, 77, 82, 90
"heterogeneity" induced by behavioral response, 82
home range, 120, 165
hypotheses, tests of 34-35, 79-80, 122-124
hypothesis, alternative, 35
hypothesis, null, 35, 79-80, 90, 139
hypothesis, statistical, 34

I

identification of animals, 168-170
immigration, 120, 135, 162, 181
indexes, use of, 32
"index to abundance," 32
inference, inductive, 14
inferences, invalid, 182
influx of animals, 181

J

jackknife estimator, 64-66, 91, 142, 190, 216. *See also* estimator under Model M_h.
Jackson, C. H. H., 34
